

The minimally invasive EHR concept was developed by MIE to provide medical practices with a clear, practical and affordable way to adopt health information technology while minimizing practice upheaval.

Fact Sheet: minimally invasive™ EHR

The WebChart family of products from MIE is part of a minimally invasive EHR portfolio. The minimally invasive EHR concept was developed by MIE to provide medical practices with a clear, practical and affordable way to adopt health information technology while minimizing practice upheaval. Contrast this approach with EHR vendors that promise to transform or revolutionize the practice of medicine while forcing dramatic alterations to established workflow.

- The WebChart product family features several points of entry – each of which is tuned to practice culture and levels of IT acceptance.
- The minimally invasive EHR product portfolio from MIE includes **WebChart EHR Now**, **WebChart EHR**, **WebChart RX**, and **WebChart RIS/PACS**. Practices can elect to adopt a fully featured EHR, or they can choose to transition to EHR in small increments. WebChart can be implemented with minimal effort and workflow impact, while generating immediate information accessibility benefits. These solutions can then be scaled to add modular EHR functionality at a pace that fits the practice.
- The minimally invasive EHR concept extends to MIE implementation services. WebChart products are scalable and configurable to fit practice workflows as well as the practice modalities of individual physicians. MIE can match product functionality to the practice and its physicians and customize system parameters to introduce workflow improvements. This tailored approach results in fewer clicks, reduced work effort and greater practice efficiency.
- The MIE technology architecture was purpose-built to support a minimally invasive impact on practice bottom lines. Our Software as a Service (SaaS) solutions are inherently affordable and require minimal hardware investments or IT support.
- The WebChart suite of products feature standards-based interoperability with best of breed healthcare IT solutions including practice management software, personal health record platforms and HIE infrastructures, fostering the least invasive and most affordable way to achieve physician office integration.
