

Begin Meaningful Use in a Matter of Minutes

WebChart EHR Now is a pre-configured version of MIE's WebChart EHR tailored specifically for solo and small practices.

WebChart was developed over the last decade, in close collaboration with physicians, nurses and practice administrators - EHR modules designed to improve efficiency and productivity without disrupting existing practice workflow.

The fortuitous result is an EHR that is already equipped to help you satisfy all of the proposed meaningful use requirements.

Fact Sheet: WebChart EHR Now

Introducing WebChart EHR Now, the EHR designed specifically for solo and small physician practices looking for a practical, affordable way to qualify for up to \$44,000 in stimulus funds. Benefits include:

minimally invasive™

WebChart EHR Now is the minimally invasive way to achieve meaningful use – the simplest-to-deploy, easiest-to-use electronic health record system available. You can sign-up for WebChart EHR Now online, and in a matter of minutes have a web-based EHR pre-configured to help you demonstrate meaningful use and reap the benefits that come with the migration from paper to electronic charts.

Proven Performance

WebChart EHR Now was developed by MIE, a company with 15 years of expertise at building and deploying healthcare IT products and services– from a widely used health information exchange that transmits 1.5 million HL7 messages a month to a portfolio of web-based electronic health record products used by physician practices around the country as well as Fortune 500 corporations operating on-site employee health clinics around the world (including Google).

Interoperable

All WebChart EHR Now systems are natively integrated – enabling multiple practices using WebChart EHR Now to share information electronically without an additional interface. WebChart EHR Now comes with built-in interoperability to consumer health platforms including Google Health, Microsoft HealthVault and NoMoreClipboard.com – satisfying patient and family engagement meaningful use requirements. WebChart EHR Now is also built to integrate with other healthcare IT applications using industry-standard interoperability protocols. WebChart EHR Now can even integrate with your existing practice management system.

Affordable

Recognizing that cost is the primary EHR adoption barrier, WebChart EHR Now is configured to deliver significant ROI. Most EHR vendors are offering solutions that will consume most, if not all, of the \$44,000 in stimulus payments available to qualifying physicians. At \$250 per physician, per month, WebChart EHR Now fees over five years amount to \$15,000 – leaving you a tidy \$29,000 surplus. Even if you invest in new laptops or tablet PCs, third-party implementation and training, or other infrastructure requirements, \$20,000 or more should remain available to spend as you see fit.
